

LWCC.ORG.ZA WEB REPORT FOR OCTOBER 2025

S 082 402 4797
E koos@koosgagiano.co.za
W koosgagiano.co.za

INTRODUCTION

This Website Performance Report provides a comprehensive analysis of key metrics that influence the effectiveness of your online presence. By examining critical factors such as Sessions, Pageviews, Bounce Rate and other user statistics, this report offers valuable insights into how your website is performing. The findings will help identify areas for improvement, ensuring your website delivers an optimal user experience and achieves your business objectives efficiently.

DEFINITIONS

Pageviews:

- **Definition:** A pageview is counted each time a user loads a page on your website. It tracks the number of times a particular page is viewed.
- **Focus:** Individual pages.
- **Measurement:** If a user visits the same page multiple times during a session, each visit counts as a separate pageview.
- **Purpose:** Useful for understanding the popularity of specific pages and identifying which content attracts the most attention.

Sessions:

- **Definition:** A session represents a single visit to your website. It encompasses all interactions a user makes within a specific time frame, usually 30 minutes of inactivity.
- **Focus:** The entire visit.
- **Measurement:** A session begins when a user enters your site and ends when there is a period of inactivity (usually 30 minutes) or the user leaves the site. Multiple pageviews, clicks, and other interactions can occur within a single session.
- **Purpose:** Useful for understanding overall user engagement, the flow of navigation, and how users interact with your site during their visit.

Key Differences:

1. **Scope:** Pageviews count every time a page is loaded, whereas sessions group multiple interactions (including pageviews) by a single user within a visit.
2. **Granularity:** Pageviews are granular and specific to each page, while sessions provide a broader overview of user behavior on the site.
3. **Multiple Counts:** A single session can include multiple pageviews, but a pageview does not indicate the number of sessions.

DEFINITIONS (CONTINUED)

Bounce Rate:

- **Definition:** Bounce rate is the percentage of visitors who enter a website and then leave (“bounce”) rather than continuing to view other pages within the same site. It measures the effectiveness of a website in encouraging visitors to explore beyond the landing page.
- **Calculation:** Bounce rate is calculated by dividing the number of single-page sessions by the total number of sessions on the website. The formula is:

$$\text{Bounce Rate} = \left(\frac{\text{Single-Page Sessions}}{\text{Total Sessions}} \right) \times 100$$

Key Points:

1. **Single-Page Sessions:** These are sessions in which the user only viewed one page and then left the site without any further interaction.
2. **Total Sessions:** This includes all sessions on the site, whether they involve multiple pageviews or just one.

SESSIONS & PAGEVIEWS

Sessions	Pageviews	Avg. Session Duration	Bounce Rate
92	144	39s	48.9%
↑ 54% vs. Previous 30 Days	↑ 98% vs. Previous 30 Days	↑ 170% vs. Previous 30 Days	↓ 17% vs. Previous 30 Days

Sessions: 92

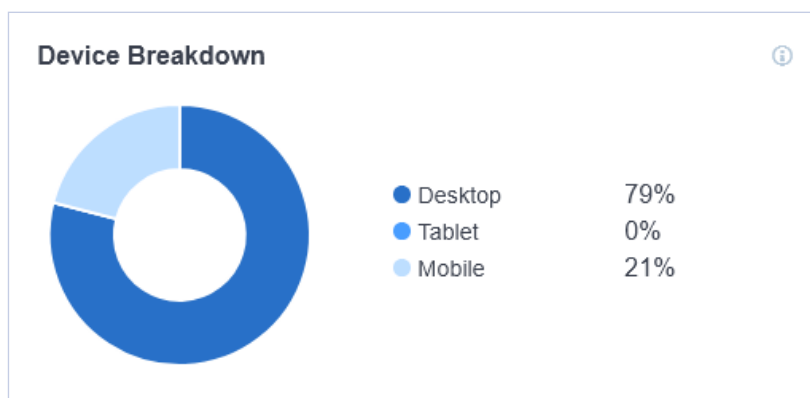

Pageviews: 144
